

Energy Frontiers Partners, LP

3930 Glade Road, Colleyville, Texas, 76304, (817) 247-8308, www.energyfrontierspartners.com

Quality Prospects

Our primary service is providing quality prospects to the oil and gas industry. The company's potential is based on the unusual position of having, in-house, a projected 15 years worth of identified and studied potential resource plays. In addition, a team with a wealth of E&P experience in both small start-ups to large independents creates a balanced approach from generation to marketing.

Tite gas plays and horizontal applications are where we shine and where we focus. A secondary goal for the company is the participation and operating of direct Working Interest in shallow gas wells.

Unique Qualities

- » We begin with the economics and cash flow analysis of a play.
- » Production decline profiles are tied to basic rock facies, then mapped.
- » Sophisticated risk analysis includes neural network software, Baye's analysis, probability scaling, conventional statistics and fractal domain statistics.
- » All hydraulic fracture treatments are modeled *in-house*.
- » Proprietary geo-navigation software (HNAV) for guiding and targeting horizontal wells.
- » An integrated and dynamic team of industry professionals with creative solutions.
- » Not just single prospects - we have large plays with low F & D costs.
- » While many energy companies are struggling to adapt to the "New Economy," we thrive in it.
- » A large library of prospects, and the ability to generate new prospects over time.
